CLAUDE INSTRUCTIONS SERVICES MENU UPDATE (NO DEVIATIONS)

Objective:
Replace the existing Services navigation menu with the exact structure and labels listed below.
1. **Replace the current top-level Services menu with the following structure:**

SERVICES

- INSULATION ▸
- MITIGATION ▸
- SEALING ▸
- REMOVAL ▸
- ATTIC FANS

This structure must appear exactly as shown, including labels and hierarchy.

2. **INSULATION submenu (exact order, exact wording)**

Under **INSULATION**, display the following dropdown items in this order:

1. Attic Insulation
2. Attic Decontamination & Sanitization
3. Crawl Space Insulation
4. Blown-In Insulation
5. Drill & Fill Insulation
6. Whole Home Insulation
7. Radiant Barrier Insulation
8. Wall Insulation
9. Ceiling Insulation
10. Commercial Insulation
11. New Construction Insulation

3. MITIGATION submenu

Under **MITIGATION**, display:

1. Sound Mitigation
2. Rodent Mitigation

4. **SEALING submenu**

Under **SEALING**, display:

1. Attic Air Sealing
2. Air Duct Sealing and Cleaning

3. Building Sealing

5. **REMOVAL submenu**

Under **REMOVAL**, display:

1. Insulation Removal

6. **ATTIC FANS**

ATTIC FANS does **not** have a dropdown.
It should be a single clickable service item.

---

7. Final rules (do not ignore)

- Do not remove any existing services unless explicitly replaced above
- Do not invent new services
- Do not collapse services into fewer categories
- Do not change wording for SEO or clarity
- Match the menu hierarchy and dropdown behavior exactly as described

This task is a **navigation restructure only**, not a copy rewrite.

Claude instruction – "Other Services You May Need" section

Add a section titled **"Other Services You May Need"** to the bottom of **every service page**, placed **above the final CTA**.

Rules for this section:

- Recommend **exactly 3 other services** (not the current service being viewed).
- Recommendations must be **relevant and logical** based on the primary service on that page.
- Do **not** invent new services. Only use services that already exist in the site's Services menu.
- Each recommendation must include:
  - Service name (heading)
  - One short supporting sentence explaining why it pairs well with the current service
  - A clear CTA link: **"Learn More →"**
- Keep the copy **brief, practical, and non-promotional**. No fluff, no sales language.
- Maintain the same layout, tone, and styling across all service pages for consistency.
- Do **not** duplicate the same three recommendations across every page. Vary them logically.

- Do **not** alter or remove any existing content on the page.

This section is meant to guide users naturally to related services, not overwhelm them.

All service pages must follow the existing service page template exactly. You are only updating and inserting copy for each page; do not change layout, structure, sections, order, or design elements in any way.

COPY FOR EACH SERVICE PAGE

1. ATTIC INSULATION

Professional attic insulation services designed to improve comfort, reduce energy loss, and protect Minnesota homes through every season.

ATTIC INSULATION EXPERTISE

COMFORT STARTS AT THE TOP OF YOUR HOME

Your attic plays a critical role in how efficiently your home holds heat in winter and stays cool in summer. In Minnesota's climate, poorly insulated attics are one of the leading causes of heat loss, uneven indoor temperatures, ice dams, and rising energy bills.

Crescent Moon Insulation provides professional attic insulation services for new construction, upgrades, and existing homes. We assess your current insulation levels, identify problem areas, and install the correct type and amount of insulation to help your home perform as it should in our climate.

Whether your attic insulation is outdated, damaged, or simply underperforming, upgrading this space is one of the most effective ways to improve comfort and long-term energy efficiency.

MINNESOTA HOMES REQUIRE PROPER ATTIC INSULATION

Operating a home in central Minnesota means dealing with long winters, extreme cold, and significant temperature swings. When attic insulation is insufficient, warm air escapes upward, forcing your heating system to work harder and increasing the risk of moisture problems and ice dams.

Proper attic insulation is not just about adding material. It is about selecting the right insulation type, achieving correct coverage, and ensuring airflow and sealing work together. When done correctly, attic insulation helps maintain consistent indoor temperatures, reduces energy waste, and protects your home's structure over time.

Our team understands how Minnesota homes are built and how attic insulation must perform to meet real-world conditions, not just minimum requirements.

SCALABLE SOLUTIONS
We handle attic insulation projects of all sizes, from small residential upgrades to full attic retrofits.

MULTIPLE INSULATION TYPES
We install the right product for your attic, including blown-in, batt, spray foam, and other insulation options based on your home's needs.

ENERGY COST REDUCTION
Proper attic insulation helps lower heating and cooling costs by reducing heat loss and improving overall efficiency.

CODE COMPLIANCE
All attic insulation work meets or exceeds Minnesota residential building and energy code standards.

MINIMAL DISRUPTION
Our crew works efficiently, protects your home, and completes installations with minimal interruption to your daily routine.

PROCESS SECTION (01–04)

01 — PROJECT REVIEW
We inspect your attic insulation, evaluate current conditions, and identify areas of heat loss, air leakage, or insufficient coverage.

02 — SPECIFICATION & PROPOSAL
You receive a clear, detailed proposal outlining insulation type, recommended R-values, scope of work, and pricing.

03 — COORDINATED INSTALLATION
Our crew completes the installation efficiently, ensuring proper coverage, clean workmanship, and attention to detail.

04 — INSPECTION & SIGN-OFF
We verify installation quality, confirm performance standards are met, and ensure everything is completed to specification.

PLANNING AN ATTIC INSULATION PROJECT?

Contact Crescent Moon Insulation to discuss attic insulation options, timelines, and pricing for your home.

---

2. **ATTIC DECONTAMINATION & SANITIZATION**

Professional attic decontamination services that remove harmful contaminants, restore insulation performance, and protect indoor air quality for Minnesota homes.

ATTIC HEALTH & SAFETY

CLEAN ATTICS. HEALTHIER HOMES.

Over time, attics can become contaminated by rodent activity, moisture, dust, and aging insulation materials. When this happens, air quality suffers, insulation performance declines, and energy costs often rise.

Crescent Moon Insulation provides professional attic decontamination and sanitization services designed to remove contaminants safely and restore attic spaces to a clean, functional condition. Our process focuses on protecting your home's air quality while preparing the attic for proper insulation performance moving forward.

Whether contamination is caused by pests, moisture intrusion, or deteriorating insulation, we take a thorough, methodical approach to ensure the issue is fully addressed.

MINNESOTA HOMES

ATTIC CONTAMINATION AFFECTS MORE THAN YOU THINK

In Minnesota's climate, attic contamination can have a direct impact on comfort, energy efficiency, and indoor air quality. Contaminated insulation can circulate dust, allergens, and odors throughout the home while forcing heating and cooling systems to work harder.

Professional attic decontamination is often the first step toward restoring proper insulation performance, improving airflow, and maintaining consistent indoor temperatures throughout the year.

CONTAMINANT REMOVAL

Rodent waste, debris, and damaged insulation are safely removed to eliminate health risks.

AIR QUALITY IMPROVEMENT

Removing contaminants helps reduce allergens, odors, and airborne particles inside the home.

INSULATION PERFORMANCE

A clean attic allows insulation to perform as intended and supports consistent indoor temperatures.

PREVENTATIVE PROTECTION

Early decontamination helps prevent long-term damage and costly repairs.

PROCESS SECTION (01–04)

01 — ATTIC INSPECTION

We assess contamination levels, insulation conditions, and moisture concerns to determine the scope of work.

02 — REMOVAL & SANITIZATION

Contaminated materials are removed, and affected areas are thoroughly cleaned and treated.

03 — PREPARATION

The attic is prepared for insulation replacement, air sealing, or additional efficiency upgrades if needed.

04 — FINAL REVIEW

We confirm the space is clean, safe, and ready to support long-term performance.

PLANNING AN ATTIC CLEANUP OR INSULATION PROJECT?

Contact Crescent Moon Insulation to discuss attic decontamination, insulation removal, and next steps for improving your home's comfort and efficiency.

REQUEST A FREE ESTIMATE
📞 (218) 232-9884

3. **CRAWL SPACE INSULATION**

Protect your home from moisture, heat loss, and poor air quality with professionally installed crawl space insulation designed for Minnesota conditions.

FOUNDATION PROTECTION

CONTROL MOISTURE. IMPROVE COMFORT.

The crawl space beneath your home plays a major role in indoor comfort, energy efficiency, and air quality. When a crawl space is poorly insulated or exposed to moisture, it allows cold air, dampness, and pollutants to move upward into living areas.

Crescent Moon Insulation provides crawl space insulation solutions that help stabilize indoor temperatures, protect structural components, and reduce moisture-related issues. Our approach focuses on sealing and insulating crawl spaces properly so your home performs efficiently year-round.

Whether your crawl space is vented, unvented, or partially conditioned, we assess the space and install insulation systems suited to your home's layout and environment.

MINNESOTA HOMES

WHY CRAWL SPACE INSULATION MATTERS

In Minnesota's climate, crawl spaces are especially vulnerable to cold temperatures and ground moisture. Without proper insulation, cold air can enter the home through floors and framing, increasing heating costs and causing uneven indoor temperatures.

Proper crawl space insulation helps reduce heat loss, limit moisture intrusion, and support healthier indoor air by minimizing drafts and condensation. Insulating this area is a key step in improving overall home efficiency and comfort.

ICON GRID SECTION (4 ITEMS)

MOISTURE CONTROL

Insulation helps block ground moisture and reduces the risk of mold and mildew.

ENERGY EFFICIENCY

Limiting air loss through the crawl space lowers heating and cooling demand.

FLOOR COMFORT

Proper insulation helps keep floors warmer during cold months.

STRUCTURAL PROTECTION

Reducing moisture exposure helps protect framing and foundation materials.

PROCESS SECTION (01–04)

01 — CRAWL SPACE ASSESSMENT

We inspect insulation levels, moisture conditions, and airflow to determine the right solution.

02 — PREPARATION

Any necessary cleanup, sealing, or moisture control measures are addressed before insulation installation.

03 — INSULATION INSTALLATION

We install crawl space insulation using materials suited to your space, ensuring full coverage and proper sealing.

04 — FINAL REVIEW

We verify performance, airflow, and insulation coverage for long-term results.

PLANNING A HOME INSULATION UPGRADE?

Contact Crescent Moon Insulation to discuss crawl space insulation options and improve your home's comfort, efficiency, and protection.

REQUEST A FREE ESTIMATE
📞 **(218) 232-9884**

4. BLOWN-IN INSULATION

A fast, effective way to improve comfort, reduce drafts, and lower energy costs in Minnesota homes and buildings.

INSULATION SOLUTIONS

FAST INSTALLATION. LASTING PERFORMANCE.

Blown-in insulation is one of the most efficient ways to upgrade attic and wall insulation without major disruption. It fills gaps, covers irregular spaces, and improves overall thermal performance far better than outdated or settled insulation.

Crescent Moon Insulation installs blown-in insulation to help reduce air leakage, improve temperature consistency, and increase energy efficiency. Whether replacing old insulation or adding additional coverage, blown-in insulation delivers reliable results with minimal downtime.

This solution is ideal for attics, wall cavities, and hard-to-reach areas where traditional insulation struggles to perform.

MINNESOTA HOMES & BUILDINGS

WHY BLOWN-IN INSULATION WORKS

A significant amount of heat loss occurs through the attic and upper portions of a building. When insulation is thin, uneven, or deteriorated, warm air escapes in winter and hot air infiltrates during summer.

Blown-in insulation creates a dense, continuous layer that reduces air movement and improves overall energy performance. Because it conforms around framing, wiring, and obstacles, it helps eliminate gaps that contribute to drafts and uneven indoor temperatures.

ICON GRID SECTION (4 ITEMS)

ENERGY SAVINGS

Improves thermal resistance and reduces heating and cooling demand.

DRAFT REDUCTION

Fills gaps and voids that allow unwanted air movement.

QUICK INSTALLATION

Most projects can be completed efficiently with minimal disruption.

VERSATILE APPLICATION

Works well in attics, walls, and retrofit projects.

PROCESS SECTION (01–04)

01 — INSULATION EVALUATION

We assess existing insulation levels, coverage, and air leakage.

02 — PREPARATION

Access points are prepared and areas are protected before installation.

03 — BLOWN-IN INSTALLATION

Insulation is evenly distributed to achieve proper coverage and depth.

04 — FINAL CHECK

We confirm consistent coverage and performance before completion.

CTA SECTION

READY TO IMPROVE YOUR HOME'S COMFORT?

Contact Crescent Moon Insulation to discuss blown-in insulation options for your home or commercial space.

REQUEST A FREE ESTIMATE
📞 **(218) 232-9884**

5. DRILL & FILL INSULATION SERVICES

Energy-efficient retrofit insulation for existing walls, improving comfort and reducing energy loss without major renovation.

INSULATION SOLUTIONS

RETROFIT INSULATION FOR EXISTING WALLS

Many homes were built with little or no insulation inside the wall cavities, allowing conditioned air to escape year-round. Drill and fill insulation is a practical retrofit solution that improves energy efficiency by filling those hidden wall spaces without removing drywall or siding.

Crescent Moon Insulation uses the drill and fill method to upgrade wall insulation in finished homes. This process helps keep warm air inside during Minnesota winters and cooled air inside during summer, resulting in more consistent indoor temperatures and lower energy costs.

Drill and fill insulation is ideal for older homes or any structure where traditional wall insulation upgrades would be disruptive or cost-prohibitive.

MINNESOTA HOMES

ENERGY EFFICIENCY STARTS INSIDE THE WALLS

In Minnesota’s climate, uninsulated or under-insulated walls are a major source of heat loss. Drill and fill insulation improves thermal performance by sealing gaps inside wall cavities, reducing air movement and preventing energy waste.

By upgrading wall insulation, homeowners can reduce strain on heating and cooling systems, improve overall comfort, and protect their home from temperature fluctuations common in extreme seasonal conditions.

ICON GRID SECTION

SCALABLE SOLUTIONS

Effective for single rooms, full homes, and retrofit projects of all sizes.

MULTIPLE INSULATION TYPES

Dense-pack cellulose insulation designed for full cavity coverage.

ENERGY COST REDUCTION

Helps lower heating and cooling costs by reducing air leakage.

MINIMAL DISRUPTION

Installed without removing drywall or major interior finishes.

PROCESS SECTION

01 — PROJECT REVIEW

We assess existing wall construction, insulation levels, and access points.

02 — SPECIFICATION & PROPOSAL

You receive a clear plan outlining insulation method, scope, and pricing.

03 — COORDINATED INSTALLATION

Small access holes are drilled and insulation is blown into each wall cavity.

04 — INSPECTION & SIGN-OFF

All openings are patched and sealed, ensuring a clean finished result.

CTA SECTION

UPGRADE YOUR WALL INSULATION WITHOUT A FULL REMODEL

Contact Crescent Moon Insulation to discuss drill and fill insulation for your home.

📞 (218) 232-9884

6. WHOLE HOME INSULATION

Complete insulation solutions designed to improve comfort, reduce energy loss, and increase efficiency throughout your entire home.

INSULATION SOLUTIONS

COMPLETE INSULATION FOR EVERY PART OF YOUR HOME

Whole home insulation focuses on identifying and correcting energy loss throughout your entire property, not just one area. From attics and wall cavities to crawl spaces and basements, every section of your home plays a role in comfort and efficiency.

Crescent Moon Insulation provides comprehensive insulation solutions that address the full building envelope. We assess existing insulation, identify air leaks, and recommend the right insulation types for each area to ensure consistent temperatures and improved indoor comfort year-round.

Rather than guessing which insulation upgrade will make the biggest impact, our team develops a clear plan that improves performance across the entire home.

MINNESOTA HOMES

ENERGY EFFICIENCY WORKS BEST AS A SYSTEM

In Minnesota’s climate, insulating only one part of a home often leaves other areas working against it. Heat loss through walls, floors, attics, and crawl spaces can add up quickly, forcing heating and cooling systems to work harder than necessary.

Whole home insulation improves energy efficiency by treating the home as a connected system. By sealing air leaks and upgrading insulation where it matters most, homeowners can reduce energy costs, eliminate drafts, and maintain more stable indoor temperatures in every season.

ICON GRID SECTION

SCALABLE SOLUTIONS

Customized insulation plans based on your home’s layout and construction.

MULTIPLE INSULATION TYPES

Batt, blown-in, spray foam, and rigid board options tailored to each area.

ENERGY COST REDUCTION

Improves thermal performance and lowers monthly utility bills.

CODE COMPLIANCE

Insulation installed to meet or exceed current energy standards.

PROCESS SECTION

01 — PROJECT REVIEW

We evaluate insulation levels, air leakage, and problem areas throughout the home.

02 — SPECIFICATION & PROPOSAL

You receive a detailed insulation plan outlining scope, materials, and pricing.

03 — COORDINATED INSTALLATION

Our crew installs insulation efficiently with minimal disruption to your home.

04 — INSPECTION & SIGN-OFF

Final checks ensure consistent coverage and long-term performance.

CTA SECTION

7. RADIANT BARRIER INSTALLATION

Reduce heat gain, improve indoor comfort, and lower cooling costs with professionally installed radiant barrier solutions.

ENERGY CONTROL

REFLECTING HEAT BEFORE IT ENTERS YOUR HOME

Radiant barriers are designed to reduce heat transfer caused by solar radiation, one of the primary sources of heat gain in homes. Unlike traditional insulation that slows heat flow, radiant barriers work by reflecting radiant heat away from living spaces before it can be absorbed.

Installed most commonly in attics, radiant barriers help keep homes cooler during warmer months by limiting the amount of heat that penetrates through the roof structure. This reduces attic temperatures and decreases the workload on air conditioning systems.

Crescent Moon Insulation installs radiant barrier systems as part of a broader energy-efficiency strategy, helping homeowners maintain more comfortable indoor temperatures while improving overall system performance.

MINNESOTA HOMES

REDUCING SOLAR HEAT GAIN WHERE IT STARTS

While radiant barriers are often associated with warmer climates, they can still play a valuable role in Minnesota homes by reducing heat buildup in attics during sunny periods. By limiting radiant heat transfer from the roof into the attic space, radiant barriers help stabilize indoor temperatures and improve cooling efficiency.

When combined with proper insulation and air sealing, radiant barriers contribute to a more balanced and energy-efficient home, particularly during peak summer conditions.

ICON GRID SECTION

SCALABLE SOLUTIONS

Installed as a standalone upgrade or combined with attic insulation improvements.

MULTIPLE APPLICATIONS

Designed for attic spaces where radiant heat transfer is most impactful.

ENERGY COST REDUCTION

Helps lower cooling demand by reflecting radiant heat away from living areas.

CODE COMPLIANCE

Installed following manufacturer guidelines and best practices.

PROCESS SECTION

01 — PROJECT REVIEW

We assess attic conditions, roof structure, and existing insulation performance.

02 — SPECIFICATION & PROPOSAL

You receive a clear plan outlining radiant barrier placement and scope.

03 — COORDINATED INSTALLATION

Our crew installs the radiant barrier efficiently with minimal disruption.

04 — INSPECTION & SIGN-OFF

Final inspection ensures proper coverage and installation quality.

CTA SECTION

📞 (218) 232-9884

8. WALL INSULATION SERVICES

Reduce heat loss, improve comfort, and increase energy efficiency with professionally installed wall insulation.

INSULATION EXPERTISE

PROTECTING COMFORT FROM THE INSIDE OUT

Poorly insulated walls allow heat to escape during winter and let cooled air leak out during summer, putting constant strain on your heating and cooling systems. Wall insulation plays a critical role in maintaining consistent indoor temperatures and improving overall energy efficiency.

Crescent Moon Insulation works with homeowners to assess existing wall insulation levels and identify areas where heat loss, drafts, or noise transfer may be occurring. Whether insulating interior walls, exterior walls, or upgrading older homes, we deliver solutions designed to improve comfort and reduce energy waste.

MINNESOTA HOMES

ENERGY EFFICIENCY STARTS IN THE WALLS

Many older homes were built with little or no wall insulation, resulting in uneven temperatures, drafts, and higher utility bills. Exterior walls are especially vulnerable, as they form a primary barrier between your living space and outdoor conditions.

Proper wall insulation helps reduce heat transfer, limits noise between rooms, and improves year-round comfort. Whether insulation is added during siding replacement or retrofitted using modern methods, upgrading wall insulation delivers measurable performance improvements.

ICON GRID SECTION

SCALABLE SOLUTIONS

Wall insulation solutions tailored to new construction and existing homes.

MULTIPLE INSULATION TYPES

Rigid board, rockwool, blown-in, fiberglass, and drill-and-fill applications.

ENERGY COST REDUCTION

Reduced heat loss and improved HVAC efficiency throughout the home.

MINIMAL DISRUPTION

Retrofit solutions designed to limit impact on finished spaces.

PROCESS SECTION

01 — PROJECT REVIEW

We evaluate existing wall insulation levels and identify problem areas.

02 — SPECIFICATION & PROPOSAL

You receive a clear recommendation for insulation type and application method.

03 — COORDINATED INSTALLATION

Our crew installs wall insulation efficiently, whether interior, exterior, or retrofit.

04 — INSPECTION & SIGN-OFF

Final inspection confirms coverage, performance, and quality.

CTA SECTION

CONSIDERING A WALL INSULATION UPGRADE?

📞 **(218) 232-9884**

9. CEILING INSULATION SERVICES

Reduce heat loss, improve comfort, and lower energy costs with professionally installed ceiling insulation.

INSULATION EXPERTISE

STOPPING HEAT LOSS WHERE IT MATTERS MOST

Ceiling insulation plays a critical role in maintaining a comfortable, energy-efficient home. Heat naturally rises, and without proper insulation in ceilings, attics, or unfinished spaces above living areas, warm air can easily escape during colder months and cool air can be lost during summer.

Crescent Moon Insulation evaluates ceiling areas throughout the home, including attic floors, unfinished crawl spaces above ceilings, and ceiling cavities directly below roof rafters. By identifying where heat loss occurs most, we install insulation solutions that improve temperature control and reduce unnecessary energy waste.

MINNESOTA HOMES

HEAT RISES, INSULATION KEEPS IT IN

Uninsulated or under-insulated ceilings are one of the most common sources of energy loss in a home. Attics and unfinished spaces above ceilings allow heat to escape quickly, forcing heating systems to work harder and increasing energy costs.

Proper ceiling insulation creates a thermal barrier that helps maintain consistent indoor temperatures. Whether insulating attic floors, ceiling joists, or ceiling cavities beneath roof rafters, the right insulation solution delivers long-term comfort and measurable savings on utility bills.

ICON GRID SECTION

SCALABLE SOLUTIONS

Ceiling insulation solutions for finished homes, renovations, and new construction.

MULTIPLE INSULATION TYPES

Blown-in insulation, batt insulation, and high-performance materials for optimal coverage.

ENERGY COST REDUCTION

Reduced heat loss and improved temperature retention year-round.

CODE COMPLIANCE

Installed to meet or exceed current building and energy standards.

PROCESS SECTION

01 — PROJECT REVIEW

We assess ceiling areas, attic spaces, and unfinished zones for heat loss.

02 — SPECIFICATION & PROPOSAL

You receive clear recommendations for insulation type and coverage.

03 — COORDINATED INSTALLATION

Our team installs ceiling insulation efficiently with minimal disruption.

04 — INSPECTION & SIGN-OFF

Final inspection ensures proper coverage and performance.

10. **COMMERCIAL INSULATION SERVICES**

Energy-efficient insulation solutions for offices, warehouses, retail spaces, and industrial buildings across Minnesota.

COMMERCIAL EXPERTISE

LARGE-SCALE PROJECTS, SAME STANDARD OF QUALITY

Commercial buildings have unique insulation demands, including larger footprints, stricter codes, and tighter construction schedules. Crescent Moon Insulation provides professional commercial insulation solutions designed to improve energy efficiency, sound control, and overall building performance.

Whether you are addressing inefficiencies in an existing building or planning insulation for a new commercial project, our team delivers precise, code-compliant installations tailored to your property's needs. We work closely with building owners, property managers, and contractors to ensure insulation issues are identified and resolved quickly and effectively.

MINNESOTA COMMERCIAL BUILDINGS

OPERATING COSTS START WITH INSULATION

Commercial buildings in Minnesota face extreme seasonal temperature swings. Poor insulation allows heat loss in winter and heat gain in summer, forcing HVAC systems to work harder and driving up operating costs.

Proper commercial insulation reduces heat transfer, improves temperature consistency, and enhances occupant comfort. From office spaces and retail units to warehouses and industrial facilities, our insulation solutions are designed to deliver long-term energy savings while meeting current building and fire safety standards.

ICON GRID SECTION

SCALABLE SOLUTIONS

Insulation services for offices, warehouses, retail spaces, and industrial facilities of all sizes.

MULTIPLE INSULATION TYPES

Spray foam, blown-in, batt, mineral wool, and rigid board solutions based on building needs.

ENERGY COST REDUCTION

Improved thermal performance leads to lower heating and cooling expenses year after year.

CODE COMPLIANCE

All work meets or exceeds Minnesota commercial energy codes and fire safety standards.

PROCESS SECTION

01 — PROJECT REVIEW

We assess your building, insulation condition, and performance requirements.

02 — SPECIFICATION & PROPOSAL

You receive a detailed proposal outlining insulation type, R-value targets, scope, and pricing.

03 — COORDINATED INSTALLATION

Our team works within your project timeline, coordinating with contractors and building managers.

04 — INSPECTION & SIGN-OFF

Post-installation inspection ensures code compliance and proper insulation performance.

CTA SECTION

PLANNING A COMMERCIAL INSULATION PROJECT?

Contact Crescent Moon Insulation to discuss insulation specifications, timelines, and pricing for your building.

REQUEST A COMMERCIAL ESTIMATE
📞 (218) 232-9884

11. NEW CONSTRUCTION INSULATION

Energy-efficient insulation solutions designed for residential and commercial new builds across Minnesota.

COMMERCIAL & RESIDENTIAL EXPERTISE

BUILT RIGHT FROM DAY ONE

New construction insulation plays a critical role in a building's long-term comfort, energy efficiency, and operating costs. When insulation is properly selected and installed during construction, it significantly reduces heat transfer, improves indoor temperature control, and lowers energy usage from the start.

Crescent Moon Insulation works closely with builders and contractors to ensure insulation systems are designed correctly for the building's layout, usage, and Minnesota climate. From single-family homes to large-scale commercial projects, we focus on installing insulation that performs reliably for years to come.

MINNESOTA NEW CONSTRUCTION

ENERGY EFFICIENCY STARTS WITH INSULATION

The effectiveness of new construction insulation depends on insulation type, correct installation, and climate requirements. In colder climates like Minnesota, higher R-value insulation is essential to limit heat loss during winter months and maintain indoor comfort year-round.

We install insulation systems that meet or exceed local building codes and energy standards, helping reduce heating and cooling demands while supporting long-term energy savings. Proper installation eliminates gaps and thermal bridging, ensuring insulation performs exactly as intended.

ICON GRID SECTION

SCALABLE SOLUTIONS

Insulation for homes, offices, warehouses, and commercial facilities of any size.

MULTIPLE INSULATION TYPES

Rockwool, blown-in, rigid foam board, fiberglass, and cellulose insulation options.

ENERGY COST REDUCTION

Improved thermal resistance reduces long-term heating and cooling expenses.

CODE COMPLIANCE

All insulation meets Minnesota energy codes and climate requirements.

PROCESS SECTION

01 — PROJECT REVIEW

We review plans and assess insulation needs based on building design and usage.

02 — SPECIFICATION & PROPOSAL

You receive a detailed proposal outlining insulation type, R-values, scope, and timeline.

03 — COORDINATED INSTALLATION

Installation is completed alongside construction schedules to avoid delays.

04 — INSPECTION & SIGN-OFF

Final inspection ensures insulation is installed correctly and performs as designed.

CTA SECTION

PLANNING A NEW CONSTRUCTION PROJECT?

Contact Crescent Moon Insulation to discuss insulation specifications, timelines, and pricing for your build.

REQUEST A COMMERCIAL ESTIMATE
📞 (218) 232-9884

12. SOUND MITIGATION SERVICES

Effective sound control solutions for quieter homes, offices, and commercial spaces across Minnesota.

SPECIALISED EXPERTISE

CONTROL NOISE. RESTORE COMFORT.

Unwanted noise can disrupt sleep, concentration, and overall comfort in both residential and commercial spaces. From traffic and street noise to sound travelling between rooms, poor sound control can quickly impact how a space is used and enjoyed.

Crescent Moon Insulation provides professional sound mitigation solutions designed to reduce noise transfer and improve acoustic comfort. We assess how sound travels through walls, ceilings, floors, and openings, then apply proven materials and techniques to limit sound intrusion and internal noise leakage.

MINNESOTA SOUND MITIGATION

REDUCING NOISE STARTS WITH THE BUILDING ENVELOPE

Sound mitigation works by absorbing, blocking, and dampening sound energy as it moves through a structure. Using a combination of insulation upgrades and sound-dampening materials, we help reduce airborne noise and vibration transfer through walls, ceilings, and floors.

Our approach is tailored to each property, whether the goal is reducing exterior noise, improving privacy between rooms, or enhancing acoustics in spaces such as offices, home theatres, or studios. While no system can eliminate all noise, proper materials and installation can significantly reduce sound levels and improve overall comfort.

ICON GRID SECTION

CUSTOM SOLUTIONS

Sound mitigation strategies designed specifically for your space and noise concerns.

PROVEN MATERIALS

Acoustic insulation, dense materials, and sound-dampening products used where they perform best.

IMPROVED COMFORT

Reduced noise intrusion supports better sleep, focus, and relaxation.

MINIMAL DISRUPTION

Installation planned to limit impact on daily use of the space.

PROCESS SECTION

01 — NOISE ASSESSMENT

We identify noise sources and evaluate how sound travels through your space.

02 — SOLUTION DESIGN

A targeted plan is developed using the appropriate sound mitigation materials.

03 — PROFESSIONAL INSTALLATION

Sound mitigation systems are installed with attention to detail and performance.

04 — FINAL REVIEW

We confirm installation effectiveness and ensure performance expectations are met.

CTA SECTION

NEED A QUIETER SPACE?

Contact Crescent Moon Insulation to discuss sound mitigation options for your home or commercial property.

REQUEST AN ESTIMATE
📞 (218) 232-9884

13. RODENT MITIGATION SERVICES

Professional rodent control and prevention solutions for residential and commercial properties across Minnesota.

PROPERTY PROTECTION

STOP RODENT DAMAGE AT THE SOURCE

Rodent infestations pose serious risks to both property and health. From damaged insulation and wiring to contamination from droppings and urine, rodents can quickly compromise the safety and comfort of a home or commercial building.

Crescent Moon Insulation provides professional rodent mitigation services designed to eliminate active infestations and prevent future entry. Our approach focuses on identifying access points, removing existing rodents, and securing vulnerable areas to protect your building long term.

MINNESOTA RODENT CONTROL

PREVENTION IS MORE EFFECTIVE THAN REPAIR

Rodents such as mice and rats can cause extensive structural damage, contaminate insulation, and spread disease if left unaddressed. Effective rodent mitigation goes beyond trapping and removal. It requires sealing entry points, addressing nesting areas, and reducing conditions that attract rodents to the property.

Our rodent mitigation services are designed to protect insulation systems, improve indoor air quality, and reduce the risk of costly repairs caused by ongoing rodent activity.

ICON GRID SECTION

ENTRY POINT SEALING

We identify and secure gaps, vents, and access points rodents use to enter buildings.

ACTIVE RODENT REMOVAL

Safe and effective removal methods tailored to the property and infestation level.

INSULATION PROTECTION

Rodent-damaged insulation is identified and addressed to restore performance.

LONG-TERM PREVENTION

Solutions designed to reduce the risk of rodents returning.

PROCESS SECTION

01 — PROPERTY INSPECTION

We assess rodent activity, entry points, and affected areas.

02 — MITIGATION PLAN

A targeted strategy is developed to remove rodents and secure the structure.

03 — IMPLEMENTATION

Rodent removal, sealing, and preventative measures are completed.

04 — FINAL REVIEW

We confirm mitigation effectiveness and recommend ongoing prevention steps.

CTA SECTION

DEALING WITH A RODENT PROBLEM?

Contact Crescent Moon Insulation to schedule a rodent mitigation consultation and protect your property.

REQUEST AN ESTIMATE
📞 (218) 232-9884

14. ATTIC AIR SEALING SERVICES

Reduce energy loss, improve comfort, and protect indoor air quality with professional attic air sealing across Minnesota.

ENERGY EFFICIENCY SOLUTIONS

SEAL THE GAPS THAT DRAIN ENERGY

Attic air sealing is one of the most effective ways to improve a home's energy efficiency and comfort. Small gaps and cracks around vents, ductwork, light fixtures, and attic penetrations allow conditioned air to escape and unfiltered outside air to enter the home.

Crescent Moon Insulation provides professional attic air sealing services that reduce energy loss, eliminate drafts, and help maintain consistent indoor temperatures year-round. Proper air sealing also protects insulation performance by preventing moisture buildup and air movement that can compromise its effectiveness.

MINNESOTA HOMES & BUILDINGS

ENERGY LOSS STARTS IN THE ATTIC

Unsealed attics are one of the largest contributors to heating and cooling loss in Minnesota homes. Air leaks allow warm air to escape in winter and hot, humid air to enter in summer, forcing HVAC systems to work harder and driving up energy costs.

Attic air sealing creates a controlled building envelope, improving energy efficiency, indoor air quality, and long-term comfort while reducing the risk of moisture-related issues such as mold and pest intrusion.

ICON GRID SECTION

REDUCED ENERGY LOSS

Limits uncontrolled airflow that drives up heating and cooling costs.

IMPROVED COMFORT

Helps maintain even indoor temperatures and reduces drafts.

MOISTURE CONTROL

Prevents condensation that can damage insulation and building materials.

AIR QUALITY PROTECTION

Reduces dust, allergens, and pollutants entering living spaces.

PROCESS SECTION

01 — ATTIC INSPECTION

We identify air leaks, penetrations, and problem areas.

02 — AIR SEALING PLAN

A targeted sealing strategy is developed for the attic structure.

03 — PROFESSIONAL SEALING

Gaps, cracks, and penetrations are sealed using appropriate materials.

04 — PERFORMANCE CHECK

We verify airflow reduction and insulation protection.

CTA SECTION

READY TO IMPROVE YOUR HOME'S COMFORT?

Contact Crescent Moon Insulation to schedule an attic air sealing assessment.

REQUEST AN ESTIMATE
📞 (218) 232-9884

15. AIR DUCT SEALING & CLEANING SERVICES

Improve indoor air quality, HVAC efficiency, and energy performance with professional air duct sealing and cleaning across Minnesota.

SYSTEM PERFORMANCE SOLUTIONS

CLEANER AIR STARTS IN YOUR DUCTWORK

Air ducts play a critical role in distributing heated and cooled air throughout your home or building. Over time, dust, debris, and leaks in the duct system can reduce HVAC efficiency, increase energy costs, and negatively impact indoor air quality.

Crescent Moon Insulation provides professional air duct sealing and cleaning services to restore system performance. By removing contaminants and sealing air leaks, we help ensure air reaches living and working spaces efficiently while reducing strain on heating and cooling equipment.

MINNESOTA HOMES & BUILDINGS

ENERGY LOSS OFTEN HIDES IN THE DUCTS

Leaky or dirty ductwork forces HVAC systems to work harder to maintain indoor comfort. Air escaping through gaps, tears, or poorly sealed connections leads to higher utility bills, uneven temperatures, and unnecessary system wear.

Professional air duct sealing reduces energy loss, while thorough cleaning removes dust, allergens, and contaminants that circulate through indoor air. Together, these services improve comfort, efficiency, and long-term system reliability.

ICON GRID SECTION

IMPROVED AIR QUALITY

Reduces dust, allergens, and airborne contaminants.

INCREASED HVAC EFFICIENCY

Sealed ducts deliver conditioned air where it’s needed.

CONSISTENT TEMPERATURES

Eliminates hot and cold spots throughout the space.

EXTENDED SYSTEM LIFE

Reduces strain on heating and cooling equipment.

PROCESS SECTION

01 — SYSTEM INSPECTION

We evaluate duct condition, airflow issues, and leakage points.

02 — CLEANING & SEALING PLAN

A tailored plan is created based on system needs.

03 — PROFESSIONAL SERVICE

Ducts are cleaned and sealed using proper materials and methods.

04 — PERFORMANCE VERIFICATION

We confirm improved airflow, efficiency, and cleanliness.

16. BUILDING SEALING SERVICES

Improve energy efficiency, indoor air quality, and long-term building performance with professional building sealing across Minnesota.

BUILDING ENVELOPE SOLUTIONS

A TIGHTER BUILDING STARTS WITH PROPER SEALING

Building sealing focuses on closing gaps, cracks, and openings in the building envelope to control unwanted airflow. These leaks often occur around windows, doors, electrical outlets, light fixtures, ductwork, and structural penetrations.

Crescent Moon Insulation provides comprehensive building sealing services designed to reduce drafts, improve comfort, and enhance overall energy efficiency. By properly sealing the building envelope, we help prevent moisture intrusion, reduce air leakage, and support a healthier indoor environment.

MINNESOTA HOMES & BUILDINGS

AIR LEAKS DRIVE ENERGY LOSS

Unsealed gaps in walls, roofs, floors, and foundations allow conditioned air to escape and unfiltered outdoor air to enter. This increases heating and cooling costs, places strain on HVAC systems, and can lead to moisture-related issues such as mold and pest intrusion.

Building sealing is a critical step in improving energy performance. When combined with proper insulation, sealing helps buildings maintain consistent temperatures and operate more efficiently year-round.

ICON GRID SECTION

IMPROVED ENERGY EFFICIENCY

Reduces air leakage and lowers heating and cooling costs.

ENHANCED INDOOR AIR QUALITY

Limits dust, allergens, and pollutants entering the building.

MOISTURE CONTROL

Helps prevent condensation, mold growth, and structural damage.

HVAC PERFORMANCE SUPPORT

Sealed ducts and penetrations improve system efficiency.

PROCESS SECTION

01 — BUILDING ASSESSMENT

We identify air leaks and problem areas throughout the building envelope.

02 — SEALING PLAN

A targeted plan is developed using the appropriate sealing methods.

03 — PROFESSIONAL APPLICATION

Weatherstripping, caulking, foam sealing, and duct sealing are applied as needed.

04 — FINAL VERIFICATION

We confirm improved airtightness and overall performance.

17. INSULATION REMOVAL SERVICES

Safe, professional removal of damaged, contaminated, or outdated insulation to restore energy efficiency and indoor air quality.

PROFESSIONAL INSULATION REMOVAL

OUT WITH THE OLD. DONE THE RIGHT WAY.

When insulation becomes old, damaged, or contaminated, it can no longer protect your home or building effectively. Water damage, pest infestations, mold growth, and general degradation all reduce insulation performance and can negatively impact indoor air quality and energy efficiency.

Crescent Moon Insulation provides professional insulation removal services for attics, crawl spaces, and other areas. Our trained team uses proper equipment and safety protocols to remove compromised insulation cleanly and efficiently, preparing your space for modern, high-performance insulation.

MINNESOTA HOMES & BUILDINGS

DAMAGED INSULATION COSTS YOU MORE

Old or contaminated insulation can lead to higher energy bills, uneven indoor temperatures, poor air quality, and long-term structural concerns. Moisture-damaged insulation can promote mold growth, while rodent-infested insulation poses health risks and odors.

Removing failing insulation is a critical first step toward restoring comfort, safety, and efficiency. Once removed, your building is ready for upgraded insulation solutions designed for Minnesota's climate.

ICON GRID SECTION

IMPROVED ENERGY EFFICIENCY

Eliminates ineffective insulation that causes heat loss and energy waste.

BETTER INDOOR AIR QUALITY

Removes contaminants, allergens, odors, and mold-affected materials.

PEST & MOISTURE CONTROL

Addresses insulation compromised by rodents, insects, or water damage.

PREP FOR NEW INSULATION

Creates a clean foundation for modern, high-performance materials.

PROCESS SECTION

01 — INSPECTION & ASSESSMENT

We evaluate insulation condition and identify contamination or damage.

02 — SAFE REMOVAL PLAN

Proper containment and removal methods are selected for your space.

03 — PROFESSIONAL REMOVAL

Old insulation is removed using specialized equipment and safety measures.

04 — CLEANUP & READY FOR UPGRADE

The area is cleaned and prepared for new insulation installation.

CTA SECTION

READY TO REMOVE OLD INSULATION SAFELY?

Contact Crescent Moon Insulation to schedule professional insulation removal and prepare your home or building for improved performance.

18. ATTIC FAN INSULATION

Improve home cooling efficiency and reduce air-conditioning costs with properly installed attic fan insulation.

ENERGY-EFFICIENT COOLING SOLUTIONS

COOL YOUR HOME WITHOUT OVERWORKING YOUR AC

Attic fan insulation works hand-in-hand with whole-house attic fans to dramatically reduce indoor heat buildup. By pulling hot air out of the attic and replacing it with cooler outdoor air, attic fans change how your home cools itself, reducing the demand on traditional air conditioning systems.

When paired with proper insulation, this system can significantly lower cooling costs while improving overall comfort. Many homeowners struggle with overheated spaces or rising energy bills during warmer months. Attic fan insulation offers a practical, cost-effective solution that allows your home to stay cooler without relying solely on air conditioning.

MINNESOTA HOMES

LOWER COOLING COSTS START IN THE ATTIC

Air conditioning keeps homes comfortable, but it can be expensive to run, especially during extended warm periods. Even with energy-efficient habits, many homes still trap heat in the attic, forcing AC systems to work harder than necessary.

Attic fan insulation helps release that trapped heat while maintaining proper thermal protection. The result is a cooler home, reduced strain on HVAC systems, and meaningful energy savings. For homeowners tired of choosing between comfort and high utility bills, this solution bridges the gap.

ICON GRID SECTION

REDUCED COOLING COSTS

Helps lower air-conditioning usage and energy expenses.

IMPROVED AIRFLOW

Moves hot attic air out and draws in cooler outside air.

INCREASED HOME COMFORT

Reduces indoor heat buildup during warm months.

ENERGY-EFFICIENT SOLUTION

Works with insulation to maximize performance and savings.

PROCESS SECTION

01 — HOME EVALUATION

We assess attic conditions, airflow, and insulation performance.

02 — SYSTEM RECOMMENDATION

We determine the right attic fan and insulation approach.

03 — PROFESSIONAL INSTALLATION

Attic fan insulation is installed for optimal airflow and efficiency.

04 — PERFORMANCE CHECK

We ensure the system operates correctly and delivers results.
